My work experience in the District and as a Consultant Engineer working out side, gives me a very good perspective of the over all picture such as the industries objective and the District roles.
I have understood two points very well:

- The concern of the industries to comply with Air Quality issues are, the required cost and does it impact the operation.
- The District point of view are; compliance, economic impact on the industry, and the concept of the good faith effort by the applicant.

I strongly believe that I am a very good candidate for this position base on my engineering back ground in Air Quality filed, and knowing the concern of the industries and how to reach a good verdict.
I am looking forward to discuss my qualification in detail with the Reviewing Committee.

Sincerely Yours

Frank Tavakoli
